This message comments on the Superfund clean-up proposal --

Too much contamination remains in the Willamette River to back-off clean up now.

Taking a do-nothing strategy will not result in adequate monitored natural recovery of this site. Continued clean-up is essential.

At this time, I understand eating fish taken from the lower Willamette is not as safe as eating fish taken from other parts of this magnificent river.

The Advisory group needs to understand that the river must be clean enough so fish taken from any area of the river are safe to eat. I also recommend this change occur within the next 10-20 years.

I don't know what the current practice is, but people or companies responsible for solution must be accountable and pay for cleanup in order to protect the environment and the wildlife living in it -- protecting people isn't a bad idea either.

Do what's right.
